at Bowman Superior Genetics - Greens Fork, IN

The 25th Anniversary Sale

FORM TO FUNCTION

FEMALE PRODUCTION SALE

Friends,

When we began this venture, a gallon of gas was \$1.09, OJ Simpson was leading the LAPD on a chase in a white Bronco and Tonya Harding had a major beef with Nancy Kerrigan.

The days are long, but the years are short.

We welcome you and your family to the 25th Anniversary Sale of Bowman Superior Genetics. It seems like such a short time ago the first three cows from Wonder View Farms arrived and jumped out of the blue, wood-floored Corn Pro trailer into a new world. Since that fall day in 1994, we have been 100% committed to the Shorthorn breed. It's amazing the places these cattle have taken our family from Greens Fork (population 273); we have viewed stock and made friends from Alberta to North Carolina, and from New York to California. Of course, we can't leave out Australia; Thermal Energy is sure making his mark 'down under.'

Producing cattle which excel for the core traits encompassing maternal instinct, ability and efficiency are fundamental for us. Fertility and function are king at BSG and for the many leading herds that have come to purchase genetics from us. If the cattle are not structurally, reproductively or maternally sound, they have no place at our table, regardless of their pedigree and EPDs. If you look back on our books today, you'll see that only the strongest cow families have survived. In today's automated world, it seems that only the "user friendly" products remain. While those words make Phil cringe, we believe the same in our cattle. These cows must pull their weight and be user friendly. While much of the seedstock industry continues their quest for extremes, we strive for optimum and balance.

Sunday,
November, 10, 2019

at Bowman Superior Genetics - Greens Fork, Ind.

As you turn the pages of this catalog, rest assured that we have offered up the very best of our program. From young cows, fall pairs, bred heifers and heifer calves: We've done our homework (easier at 60+ than 16) and dug deep into the pipeline to provide the most powerful and exciting maternal-based Short-horns anywhere. Our young sire offering is as exciting as it has ever been. These two bulls represent the most potent genetics in our herd and are sure to take any maternally-focused cattle operation to the next level in the Shorthorn breed.

Finally, we want to say, Thank You, sincerely. Thank you to the many friends we've acquired over the years that have utilized BSG genetics in their herd. Whether it be a front pasture brood matron or frozen embryos, your faith in our program is what drives us to continue our journey in creating the ideal beef cow.

Sincerely,
Phillip Bowman & Family

TERMS AND CONDITIONS

Terms of the sale are cash or check payable to the Sale Clerk. Cattle will not be released until payment or satisfactory arrangements for payment has been made and approved by the Sale Manager. The Sale Manager reserves the right to require a certified check as settlement before releasing any cattle. All lots offered sell under the standard terms and conditions endorsed by the American Shorthorn Association.

Bidding: All lots sell to the highest bidder. Any disputes or challenges regarding bids will be settled by the auctioneer. His decision will be final.

Absentee Bidding: If you will not be able to attend the sale, please contact the Sale Manager, Auctioneer or Sale Staff a day in advance in order to secure your bidder number and place your orders.

Purchaser's Risk: All animals become property of the buyer as soon as declared sold by the auctioneer, unless other arrangements are made prior to the sale.

Health: All animals will be accompanied by proper health certificates making them eligible for interstate shipment. Prospective buyers should make themselves aware of health requirements for their respective states.

Breeding: All animals sell under the terms and conditions of the American Shorthorn Association Standard Breeding Guarantee. Bred females have been pregnancy examined safe in calf by a licensed veterinarian. Any updated breeding information will be made available on sale day.

Announcements from the auction block will take precedence over the printed material in this catalog and other announcements.

Liabilities: All persons who attend this sale do so at their own risk. The Sale Contributors or Sale Manager assumes no liabilities for any accidents that may occur. The auctioneer or Sale Manager assumes no liability for loss or injury to the livestock due to theft, mysterious disappearance, sickness, or improper handling.

Registrations: All animals selling are registered with the American Shorthorn Association unless otherwise stated. A certificate of registry and transfer will be furnished for each animal sold. It shall be the responsibility of the seller and/or sale manager to submit the properly prepared transfer application promptly to the American Shorthorn Association. The official ASA registration certificate is not a legal title or proof of ownership. The registration paper simply states who has ASA membership rights to control the registration of progeny associated with an individual registered animal along with the transfer of said rights to a new owner.

Genetic Condition Disclaimer: The seller is responsible for disclosure of all known Genetic Condition Abnormalities at the time of sale. Provided the seller has disclosed all Shorthorn Genetic Conditions known to the seller and /or to the Shorthorn breed at the time of sale, the buyer assumes all risk associated with the purchase of known or unknown Genetic Condition Abnormalities of carrier animals. The Seller is not responsible for any new Genetic Condition Abnormalities that may be determined or discovered by the ASA after the time of sale for any animal or genetic material.

SHORTHORN ENTHUSIASTS,

I have always had great interest in the Shorthorn breed dating back to college days at Kansas State University with several enthusiastic young Shorthorn breeders and then working with a great group of commercially oriented Shorthorn producers in west central Missouri during my tenure with University of Missouri Extension. Their ability to make long lived, low maintenance mother cows combined with a unique propensity to advance marbling with some the very best breeds in the world should make them interesting to more cattlemen in the beef business. As we search for a unique second British breed to complement our continental genetics for even higher levels of hybrid vigor, the best cattle that Shorthorn has to offer are definitely in the conversation.

"Best" is the key! Thankfully, there is becoming less and less room in our industry for below average. The Bowman Superior Genetics program is truly among the best this breed or any breed has to offer, not because they are blessed with great genetics or are just smarter than everyone else, but because they work harder to be better and have committed time and dollars to achieving that elevated level of value.

Data collection and use along with and a solid commitment to the larger beef business are among the core value propositions that help them achieve their success. Years of amassing, then using complete information sets, not just for the standards EPDs, but for traits not currently utilized by their association like mature cow size and scrotal circumference, are the basis for their improvement. The old adage that "You get what you select for," is spot-on when it comes to beef cattle breeding though not nearly enough breeders in the seedstock business understand that for the long term. One glance at the Bowman's genetic trends for almost every economically important trait shows clearly that when you used unbiased EPD data tools for decision making you will absolutely get where you want to go. Clearly that is even more important to their commercial customers who totally depend on generational improvement for the traits that effect their bottom line every single time they purchase genetics.

Always promoting progress is part of the reason too that Bowman Superior Genetics are known and respected not only in the US, but around the world. Newer technologies too like 100% herd DNA genomic enhancement, faster generational turnover to insure greater progress are combined with time tested practices like collecting carcass data on every sire used and developing all bulls and females on a non-starch diet in order to avoid masking non-useful genetics with feed and management, are all part of the commercial business targeted program here.

So, whether you are searching for some of the world's most consistent and highest profit Shorthorn genetics or are considering some of the designed composite products in the future of the Bowman program, I am confident you will appreciate the commitment to customers and the commitment to the future these folks put to plan each year and for each new generation.

Sincerely,
Marty Ropp,
Allied Genetic Resources

WHO IS ALLIED GENETIC RESOURCES?

Allied is a large group of commercially-focused registered, seedstock producers across multiple breeds who market bulls and bred heifers to the greater beef industry. A goal of Allied is the implementation of the greatest technologies available, from DNA to developing hybrid/composite seedstock similar to the Bowman Blend. Allied markets more than 10,000 bulls annually equating by their estimate to nearly 750,000 matings in the beef industry every year.

Bred to Muridale Thermal Energy 15A, due mid-March 2020.

We could not think of a better way to kick off the 2019 offering than with a direct daughter of 73R. The Maggie cow family speaks for itself. It's hard to let go of a direct daughter of 73R, but with this special sale, we had to sell her stoutest daughter to date. Maggie Mae is sired by the very impressive Saskvalley Imagine 65X who is used exclusively in the Leveldale program. This cow carries all the mass and volume 73R transmits so well, while having a stunning front end. Donor Dam qualified by the ASA. This cow may be carrying your next herd sire or donor dam.

COW

BSG Profitwise 1767

Special Thank You to our friends at Shadybrook Shorthorns, West Brome, Quebec, Canada for your 2018 purchase of BSG Profitwise 1767, maternal brother to Lot 1. Congratulations to Byland Polled Shorthorns and Paint Valley Farms of Ohio for purchasing U.S. rights, and to Royalla Shorthorns and Eloora Shorthorns on Australian rights.

BREEDING PHILOSOPHY

PRACTICAL IDEAS. PRACTICAL CATTLE.

You can't manage what you don't measure.

At BSG we invest many man hours and dollars on gathering the most pertinent information on our cattle; we use it in our mating schemes, and offer the results to you, our fellow investor. Calving Scores, Birth Weights, Weaning Weights, Yearling Weights, Ultrasound Carcass Scans, Calving Scores, Mature Cow Hip Heights, Mature Cow Weights, and more are measured throughout the year. Some of these don't even go into EPDs yet, but we will have the data when the day comes.

Function and Eye Appeal.

Who says you can't have cattle that are industry applicable and still make people stop and turn their head? Sadly, too many say this. Although there is growing divergency in "Show vs. Commercial," we work tirelessly to create an animal worthy of both. We find that cattle bred for generations only off of paper are about as stout as a piece of paper. It is well evidenced that cattle bred strictly off of phenotype appeal are more built off of the manipulation of feed and cosmetics, inheriting terminal traits at a scary fast rate and are below average for maternal function. At BSG we take the nature of balance seriously and hope you will too.

Style needs Substance.

Here is a favorite quote we often are reminded of when making genetic decisions. This was coined by the founders of the American Simmental Association sometime in the late 1960's – early 1970's. We convert it for our Shorthorns!

*"Visual analysis tells you what a Shorthorn appears to be.
His pedigree tells you what he should be.
His performance and progeny tests tell you what he actually is."*

Like a successful basketball program, we look deeper than size and appearance when making our decisions on recruitment and retention. The animals have to fit into a box of "Total Skill Set."

Consider this:

- Are all tall fellas good basketball players? No. (Luke is the perfect example)

Or how about...

- Are all who wear cowboy hats, cowboys? No.

- Are all Supermodel's good mothers? No.

We assume that visual appearance controls maternal ability, but it does not. It is just the same in the basketball world-- height does not control shooting ability or overall game performance.

Profit = Output – Input.

The Profit Equation is a very important concept, because too often folks focus only on outputs; i.e. extreme pounds, monster Ribeye and higher MILK--- folks often think that 'more is better.' When one boasts about the size of the weaned calves we often ponder, "But how much feed did the cows have to consume in the pasture to milk that much, to wean that size of a calf? What is herds energy requirement? Did the dams all breed back?

Don't get us wrong, we are always looking to add some more gain in our cattle; ultimately, every animal is sold by the pound at some point in their life. But it is important to realize that constant selection for extreme growth is also selecting for extreme appetite and higher cow maintenance costs, and this happens when one doesn't select for cattle that will stop growing at two years of age. We also know that big cows wean less pounds per acre of cow exposed when compared to her more moderate coworker. If we can keep mature cow size in moderation, therefore keeping feeding inputs lower on the commercial man's budget, while at the same time select for increased – but not extreme – growth, then we are doing our part to generate a cow that will produce more dollars per acre than she takes in, and for a number of years.

The inconvenient truth is that in order to be successful long term, your investment strategies, like in any business, must be based on facts and not just folklore. Sustainability and growth for this time-tested breed is based on its influence in the commercial world. If you're investing in genetics, look at the animal's genetic resume. Look at the results from objective facts. Look at how the individuals do their job as maternal beef cattle. When it comes to return on investment that helps you win long term, focus on the #1 most important trait in Shorthorn production, Profitability.

Bred to Muridale Thermal Energy 15A, due mid-March 2020.

What a fitting name. This cow is a true sale highlight. Her angulation and femininity combined with width of base and a true beef cow body makes her the definition of a "front pasture cow." We always planned to flush this cow but never got an opportunity. Her incredible mother sold in our 2016 sale to Schafer Angus Ranch of California and did a marvelous job until her untimely death; this again made 1524 a future donor in our mind. Study her data; she is the maternal kind but her carcass traits are rare and powerful.

Retaining the right to one successful flush with a minimum of 6 transferable embryos. BSG will cover drug costs.

BW: 78 lbs.

Toronto has been a standout of a calf since birth, offering tremendous phenotype in conjunction with progressive maternal and calving ease genetics across the board. From the ground up and at every angle, he is impressive and fault free in his design. When we think of the great sons Taylor Made has created, like Boardwalk and Ringo, we know Toronto can join this elite status and raise the \$BMI value. On the performance side of things, this bull is a sure bet for heifers and his calves will go on to be attractive, productive maternal matrons. The daughters this sire will create will progress the breed for both phenotype and genotype; something that is rare in. Whether your business is showing calves or marketing bred, everyone needs a high phenotype, calving ease sire to breed to both heifers and cows.

A.I. bred to Muridale Thermal Energy 15A, due February 26, 2020.
A really uniquely bred young Shorthorn cow. Stampede x Lad 13N is a mating that was so well planned by Mr. Power at Forest Hall Shorthorns. She is admirable across the board with her data being a great calving ease cow with incredible carcass merit. Not many Stampede's available in this sale. Her mating to Thermal Energy is ideal.

2024 reads on paper like no other Shorthorn cow in the breed, and her phenotype is one of the best we have ever found. There is no other cow in the breed with her combination of Calving Ease, Low BW, WW, YW, STAY, Marbling and \$BMI. There is no purebred female close to her. 2024 is the definition of Calving Ease, Carcass and Cows! Last year her flush sold to Spry's Shorthorn of Australia, and embryos landed in herds such as Shadybrook Shorthorns, Quebec, Gilman Shorthorns, both Dale and Mike Studer's herds of Iowa, Vogel Shorthorn Farm, ND, the Chris Downing herd, Ohio, Richard Colby's powerful Oakwood Farms in Wisconsin, Nick Anderson's program in Minnesota and more. Again, the facts prove that other breeds need applicable Shorthorn influence in their populations, and the commercial man needs the right kind of Shorthorns to reduce costs and generate more profit. Mash the accelerator down on making cattle good all the way around with our foundation Lassie who's legend is being felt by breeders nationwide.

Maternal traits and carcass pounds and value; Lassie ranks in the Top 1% CED & \$F, Top 2% \$BMI, WW, YW & CW, Top 15% or better for BW, TM, CEM, STAY, MARB & \$CEZ. She is a future donor because no matter how you breed her, the calves will look good, calve easy, and grow like crazy while being under control for stature. Lassie 2024 has out produced herself here and the new owner has one of the greatest performance animals, of any beef breed, in the 19 million head IGS database. Lassie 1801 is carrying what we think is the idea mating. Coalpit Creek Leader 6th compliments this modern marvel with old school, grass-based genetics and will additionally solidify 1801's offering of Calving Ease, Carcass and Cows. She has already been DNA Donor Qualified for the new owner.

A.I. bred to Coalpit Creek Leader 6th, due February 16, 2020. Make sure you check out this one's video online. You're going love this female's picture-perfect pattern. Long and super clean fronted, long spine, long hip, plenty of width of pins and carries this advantage down to her base. She has a ton of rib for not only depth, but her spring of rib reminds of us her famous donor dam. Her balance and eye appeal are pleasing to the most critical of cattlemen. She stands on good feet and sound legs and really puts it all together in a complete package.

For fun, let's look at her genetic profile.... Outlier. Genetic freak. Off the charts. Breed advancer. – All of these describe Lassie 1801. The latest natural calf by the living legendary donor, Lassie 2024, has no competition in the database for her CE to YW spread,

BRED HEIFER - EMBRYOS

BSG made a commitment in the early 2000's to invest in progeny proven genetics, incorporate our traditional stockman's skills by seeking cattle of function and eye appeal, and embrace science-based technology to breed Shorthorn and Shorthorn-influenced composites that create value from genetic conception to public consumption.

Our evidence-backed commitment is stronger than ever before, simply because we know making predictable genetic change in continuum is crucial for the longevity of this great breed of cattle.

SASKVALLEY DORA 70N

BSG LA SCARLET 013 OF 12M SBR RIDER 12M
SULL SCARLETS RIDER 2T

Will calve by sale day to Saskvalley Banjo 268B.

Dam of the Lot 10 bred heifer. You can now see where she gets her quality. Goes back to the hard to find Scarlet's that really did great things for many herds, including our friends at Shadybrook Shorthorns.

BSG RED ENVY 135 OF 128S SASKVALLEY STAMPEDE 128S
ML RED ENVY 0428 OF 7026

Will calve by sale day to Saskvalley Banjo 268B.

Double bred Saskvalley Stampede 128S. This one is out of 1322, an awesome Stampede son that was sold to Pattie Bergstrom of Wyoming. This one is easy fleshing and will raise a good one by Banjo - a triple bred Ultra 12J!

SASKVALLEY DANDY 340Z

BSG RAINBOWROSE 1527 137W JSF GAUGE 137W
BSG RAINBOW ROSE 1201 12M

Will calve by sale day to Saskvalley Banjo 268B.

Maybe the high profit female in the sale; ranks in the Top 1% \$BMI, Top 5% \$F, Top 10% \$CEZ. A cow with tons of natural body and forage-type volume. You'll really like her balance and softness.
